**Server 2003**

**Konect Elite™**

**Reseller Benefits**

**Functionality**

- Application Publishing
- Load Balancing (multi servers)
- Integrated Konect Drive
- Advanced Printing (no setup required)

**Simplicity**

- Seamless End User Access Experience
- Single Unified Desktop Experience

**Centralized Management**

- Single Centralized Management Console

**Scalability**

- Migration Path to Server 2008 R2 and Windows 7 client

**Enhanced Security**

- Increased Security of Data and Applications
  - Group Policy Manager
  - Session Manager

**Support**

- Email and Phone Support (WebEx)
- Microsoft Centric
- Software Assurance

## For Server 2003 – Reseller Benefits

### 1. Functionality

- **Application Publishing** – This feature does not exist within Server 2003. Only a Terminal Server desktop can be delivered. Without Konect *Elite*, you cannot publish individual applications via Server 2003.
- **Load Balancing (multi servers)** – There are no baseline load balancing capabilities for multiple servers within Server 2003. Therefore, Konect *Elite* is required to provide this capability using Server 2003 for Server Farms (greater than 1 server).
- **Integrated Konect Drive** – Konect *Elite* dynamically maps files and folders into a clients' local desktop, thereby allowing users to seamlessly interact with their local client.
- **Advanced Printing (no setup)** – Konect *Elite* dynamically maps local printers on the server providing remote print capabilities.

### 2. Simplicity

- **Seamless End User Access Experience** - Regardless of whether the client is using **XP, Vista or Windows 7**, the user access experience does not change using Konect *Elite*. Application delivery is completely transparent to the user. That is, applications appear as if they are running from their local device. Users can launch remote applications and information from their desktop as application icons from their Start menu, desktop shortcuts, file explorer or Systems Tray. This, in turn, eliminates the need for training / retraining of end users.
- **Single Unified Desktop Experience** – Users do not have to flip flop from their local client desktop to a hosted Terminal Server desktop, creating confusion / headache, increased training and support.

### 3. Centralized Management

- **Single Centralized Management Console** – Konect *Elite* provides a centralized management interface to manage and deploy applications and desktops. Otherwise, there is no management interface for application and desktop publishing within Server 2003 as this feature does not exist.

## 4. Scalability

- **Migration Path** - Konect *Elite* supports your current Microsoft server and client investments (Server 2003, XP & Vista clients) even as you begin to adopt Windows 7 and Server 2008 R2 into your existing environment.

## 5. Enhanced Security

- **Increased Security of Data and Applications**
  - **Group Policy Manager** - Konect *Elite's* built-in policy management provides the control IT administrators need to ensure that users have the appropriate level of access to the right information and business resources they require.
  - **Session Manager** – Monitor a users session. For example, which applications they are currently working on; have worked on; have touched, etc.

## 6. Support

- **Email and Phone Support (WebEx)** – Live support
- **Microsoft Centric** – Konect *Elite* is built on a Microsoft specific platform. As 98% of SMBs are Microsoft centric, desktopsites product support becomes laser focused. Thus, delivery quick resolutions to all support issues.
- **Software Assurance** – Ensures your software is up-to-date with the latest upgrade fixes for the current software version. This also includes 10 telephone support incidences and unlimited email support. Without software assurance, no live telephone support is provided for the software.

### About desktopsites

desktopsites is a leading developer of innovative and cost effective application and desktop virtualization solutions for small and mid-size businesses ("SMBs"). desktopsites' Konect *Elite* solution delivers applications to physical or virtual desktops on-demand to users through a single management console without sacrificing the features typically available with more expensive alternatives.
